

NYOD

OBVIOUS IS ORDINARY.
WE'RE NOT.

NYOD: STRATEGIC DIAGNOSIS

Turning insight into our next phase of growth.

OBVIOUS DIAGNOSIS

Product strength is not the bottleneck— visibility, acquisition efficiency, and repeat are.

1

Visibility

Improve where and how
customers discover
NÜYO.

2

Acquisition Economics

Focus on creative refresh,
channel mix & conversion
improvements.

3

Lifetime Value

Grow repeat purchases
and subscriptions—our
highest-return lever.

CRITICAL DIAGNOSIS

The largest conversion opportunity may lie in **checkout trust**,

where COD demand and payment friction warrant structured experimentation before increasing media spend.

Retention is **underexploited**; repeat customers spend more,

yet the growth strategy is still heavily acquisition-driven.

Channel **concentration risk** is extremely high.

Current business is almost entirely dependent on: **Shopify, Meta, Google.**

If Meta CPMs rise further, there is no diversified acquisition engine to absorb the shock. This is a strategic risk, not merely a marketing issue.

Untapped Growth Levers

Quick Commerce
(10–30 min moments)

Partnership Channels / B2B
(Corporate, Hospitality, Institutions, Gifting)

The company lacks a **measurement system**.

Attribution problem. No clear segmentation between organic and non-organic visitors. This makes many optimization decisions guesswork.

- ✗ No full-funnel attribution
- ✗ No organic vs non-organic insights
- ✗ No cohort or LTV tracking
- ✗ Limited data-driven decision making

90-DAY EXPERIMENTS

BUILD HABITS. BUILD CHANNELS. BUILD GROWTH.

GROWTH ENGINE EXPANSION (46–90 DAYS)

**REMOVE
CHECKOUT FRICTION**

**SELL VALUE,
NOT DISCOUNTS**

**OWN THE
“HEALTHY HABIT”
POSITIONING**

Run high-impact experiments to reduce friction, communicate value, and build daily habit positioning. Test creative, messaging, and on-page elements to lift conversion, repeat rate, and CAC efficiency.

0–45 DAYS
Test & Optimize

+10–20%
Lift in Key KPIs

**More Repeat
Purchases**

**Build Daily
Habit & Loyalty**

OUTCOME: Lower CAC • Higher Repeat Rate • Stronger Habit Loop • Scalable Growth

90-DAY EXPERIMENTS

BRAND ACTIVATIONS THAT COMPOUND AWARENESS.

Back-to-back pop-ups in high-intent zones to stay top-of-mind and drive trial.

HOW IT WORKS

1. PICK HIGH-INTENT ZONES

Gyms, offices, colleges, cafes, events.

2. BACK-TO-BACK POP-UPS

Activate in a new location every week.

3. CONSISTENT EXPERIENCE

Same vibe.
Strong sampling.
Clear messaging.

4. AMPLIFY LOCALLY

Geo-targeted ads,
influencer visits,
community buzz.

5. COMPOUND IMPACT

New audience
each week.
Stronger recall.

REACH HIGH-INTENT AUDIENCES

Meet people where they already care about health.

BACK-TO-BACK PRESENCE

Stay visible.
Build familiarity and trust.

DRIVE TRIAL & ENGAGEMENT

Sampling + interaction turns awareness into action.

COMPOUND GROWTH

More touchpoints.
More recall.
More customers.

52-WEEK DRIVER-BASED FORECAST MODEL

A driver-based operating model replaces guesswork with measurable growth levers.

Every assumption updates automatically across all 52 weeks, enabling scenario planning for **Base**, **Optimistic**, and **Conservative** growth cases.

NYOD

The driver tree — and where it honestly lands

Modeled weekly (52 rows), seasonality-adjusted, rolling up to a monthly P&L, cash balance and capacity check.

Net revenue by month, ₹ lakh (Base / Bull / Bear)

Full driver-based model: NYOD_Model.xlsx —
Monthly Engine, Weekly Rollout, Scenario Comparison tabs

JUN '27 MRR OUTLOOK

Base case

₹21.4L (8.5x)

Bull case (with ~₹1.8cr raise)

₹43.3L (17.3x)

Bear case

₹5.5L (2.2x)

Honest read: even a well-executed Bull case reaches ~43% of the ₹1cr stretch goal. Getting the rest of the way needs a materially larger, funded, multi-city offline/GT push beyond what this organic-led model assumes.

Cans, batches and cash — the discipline behind the growth line

CANS REQUIRED VS CAPACITY CEILING (BASE CASE)

Base-case capacity utilisation stays **under 13% all year** — the 2nd co-packer line (committed Aug-26, live Oct-26) is **festive-readiness insurance**, not a hard constraint. It only binds under **Bull-case**, multi-channel scale.

BASE-CASE CASH BALANCE VS ₹5L FLOOR, ₹ LAKH

Cash dips as Batch 2, the 2nd-line capex (₹6L) and early marketing losses land together in Feb-27 — but **never breaches the floor**. No funding needed in Base case.

FIVE RISKS WORTH LOSING SLEEP OVER

 RISK	 SIGNAL IN THE DATA	 EARLY-WARNING METRIC	 MITIGATION
 MONSOON DEMAND AIR-POCKET	 RTD category index falls to 84–96 (Jul–Sep)	 Weekly sessions & CVR vs seasonality-adjusted plan	 Front-load retention/CRM spend; hold paid growth to +5%/mo; don't chase CAC into a soft market
 SUBSCRIPTION RENEWAL DISAPPOINTS	 Unknown — first renewals due Jul 10	 Renewal % on first 3 cohorts	 Pre-built win-back flow; renewal <65% triggers a Sub&Save pricing/perk review
 META CAC KEEPS CLIMBING	 CAC +20% May→Jun; freq 3,8, CPM +22%	 Weekly blended CAC vs plan	 Creative-refresh sprint (Exp #2); diversify into Google/organic if CAC > ₹650
 SINGLE-LINE MANUFACTURING RISK	 One co-packer, 48k/mo ceiling, MOQ 24k	 Finished-goods days-of-cover	 2nd line committed Aug-26; carry 1 extra batch of buffer stock into Q2 festive
 JANUARY'S SEASONAL TENSION	 Cold-drink demand weakest (7%) exactly when gut-health interest peaks (126)	 Jan sessions & CVR by campaign	 'Gut reset' campaign reframes NYOD as a habit, not a cold-weather treat (see Q3 plan)

Stay ahead by watching signals, acting early, and building buffers where it matters.

THE WEEKLY DASHBOARD WE'D ACTUALLY RUN THIS BUSINESS ON

01		BLENDED PAID CAC VS CM1/ORDER	The core solvency check — CAC must trend toward CM1/order (₹392), not away from it
02		CHECKOUT → ORDER CONVERSION	Direct read on the COD/trust fix — the biggest near-term CRO lever
03		SUBSCRIBE&SAVE ACTIVE SUBS + RENEWAL %	The single biggest lever on the 12-month outcome — track from week 1
04		CANS REQUIRED VS CAPACITY HEADROOM	Early warning for the 2nd-line commit and batch timing
05		CASH BALANCE VS ₹5L FLOOR	Non-negotiable survival metric
06		REPEAT RATE, 30/60-DAY COHORT	Tracks whether retention is really improving or just aging
07		MARKETPLACE/QC CONTRIBUTION MARGIN	Kill/scale signal for the new channels (Exp #4)

7 metrics. 1 dashboard. Clear signals. Smarter decisions.

₹1 Cr is a stretch.

₹20–45L is the real, earned outcome.
